

Smart HP - WIFI Registration and pairing guide:

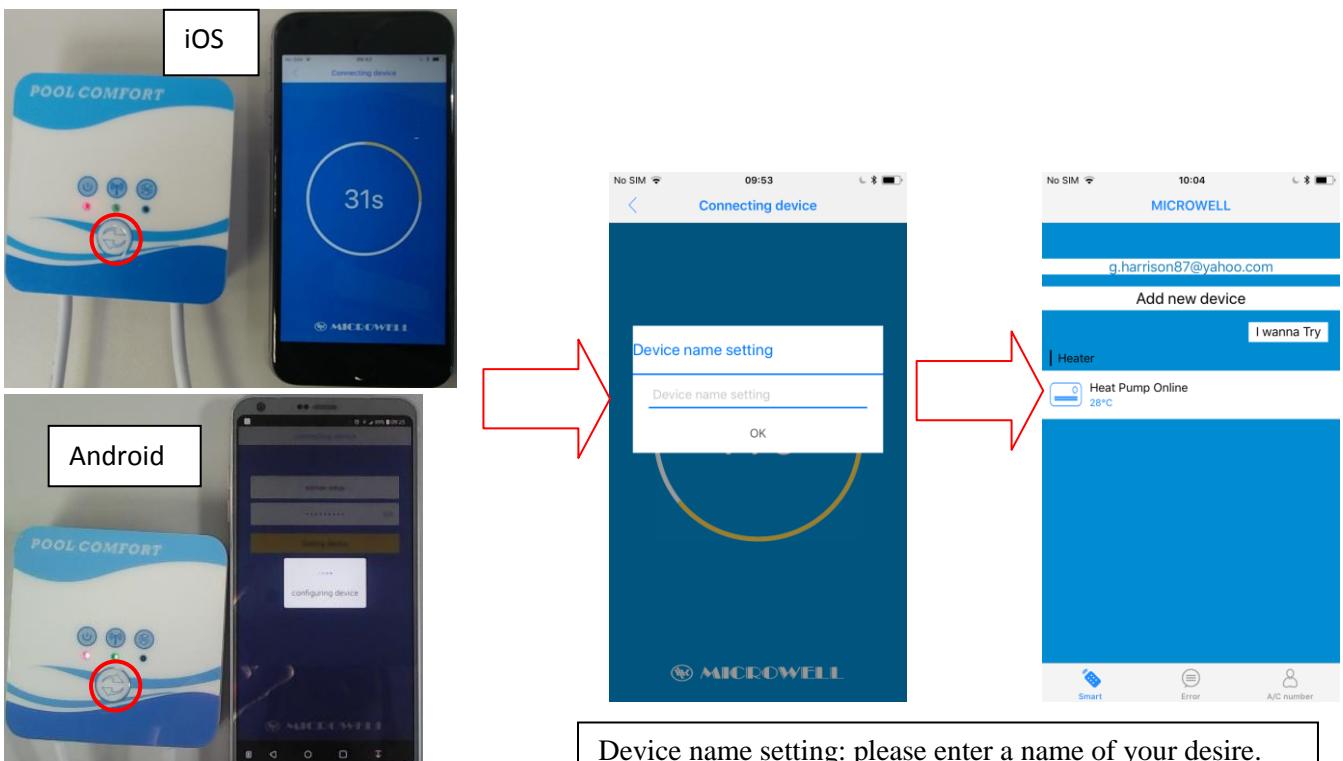

1. To use your WIFI with Micowell swimming pool heat pump you need to register your email address. This is due to security purposes so only you have access to the pump. After registration you will be able to log in to the application and control your heat pump.
2. Click the „New User“ and enter your e-mail address and password to be used and click „Submit“. Email address in format: xxxx@yyyy.zz
Password in format of combination letters and numbers. This is unique password you now create for an entrance to the Smart HP Micowell application.
3. You will receive an e-mail to email address you inserted in step 2 shortly with an activation link. Click the link and activate your account. Once activation is successful, please proceed to step 4.
4. Now you can enter your e-mail address and password into the fields in the application and click „Login“

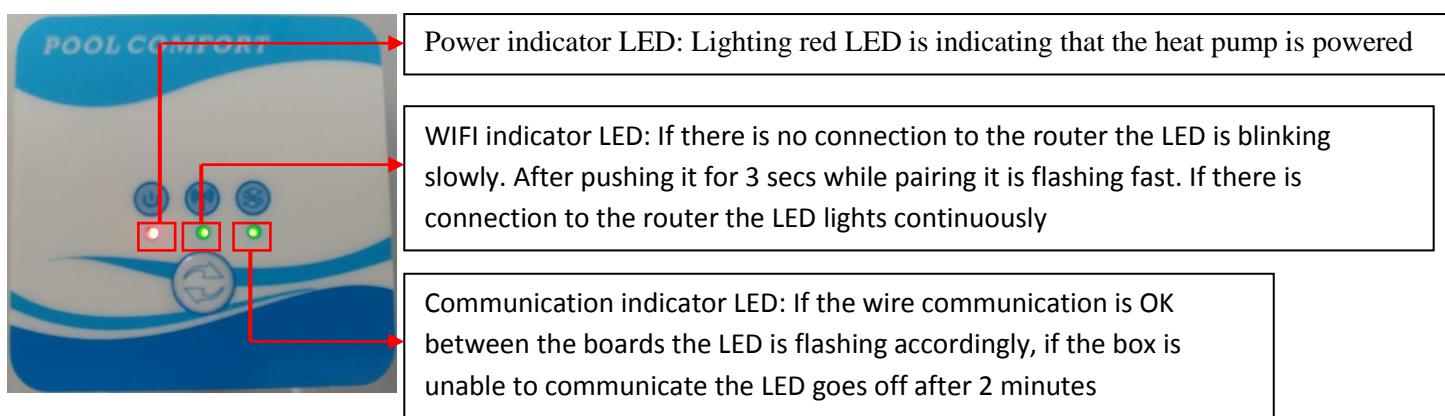

5. On the next screen you find the list of added devices. There is not any device yet so click the „Add new device“ and proceed to the screen where you select the WIFI network (if you are connected to one then it will be added automatically), enter its password and click „Setting device“. We suggest to perform this operation on a mobile device which is connected to the same WIFI network where the heat pump's WIFI module will be connected.

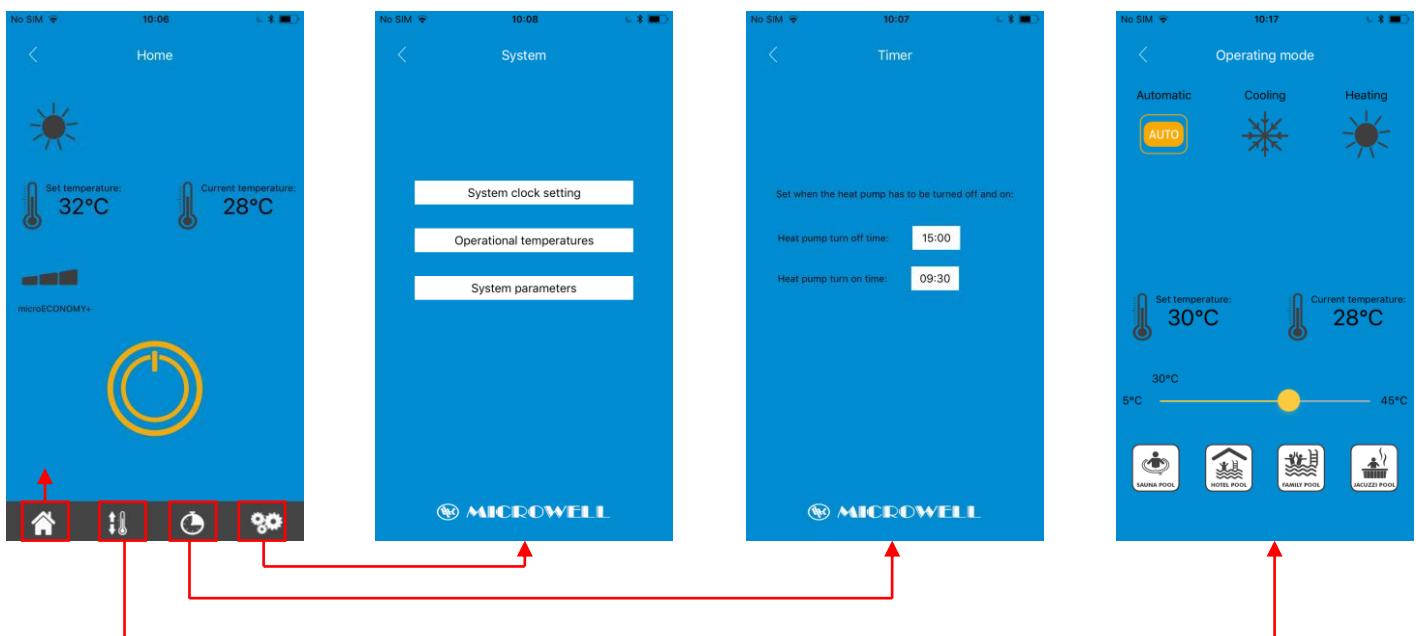

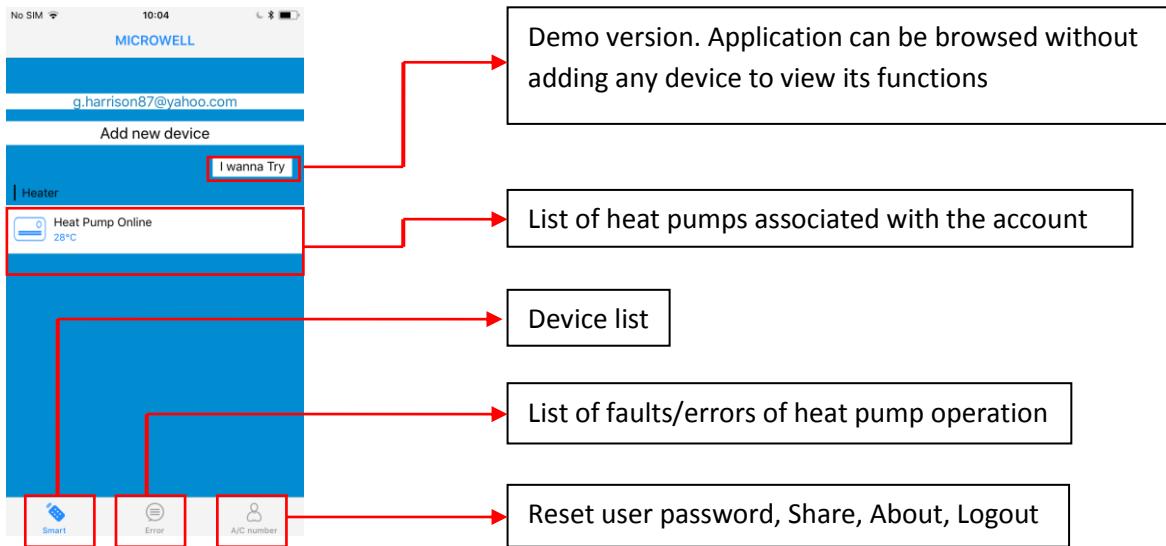

6. iOS: When the counter is counting push the button on the WIFI box for 3 seconds (the WIFI indicator LED should start flashing fast) to initiate pairing.
Android: When „Configuring device“ screen is displayed push the button on the WIFI box for 3 seconds (the WIFI indicator LED should start flashing fast) to initiate pairing.
7. After a few seconds a window pops up where you can enter the name of your heat pump.
8. After this step the application finalizes the pairing process and the heat pump becomes available and ready to use

Explanation of indicator LEDs on the WIFI box:

Brief explanation of device list screen:

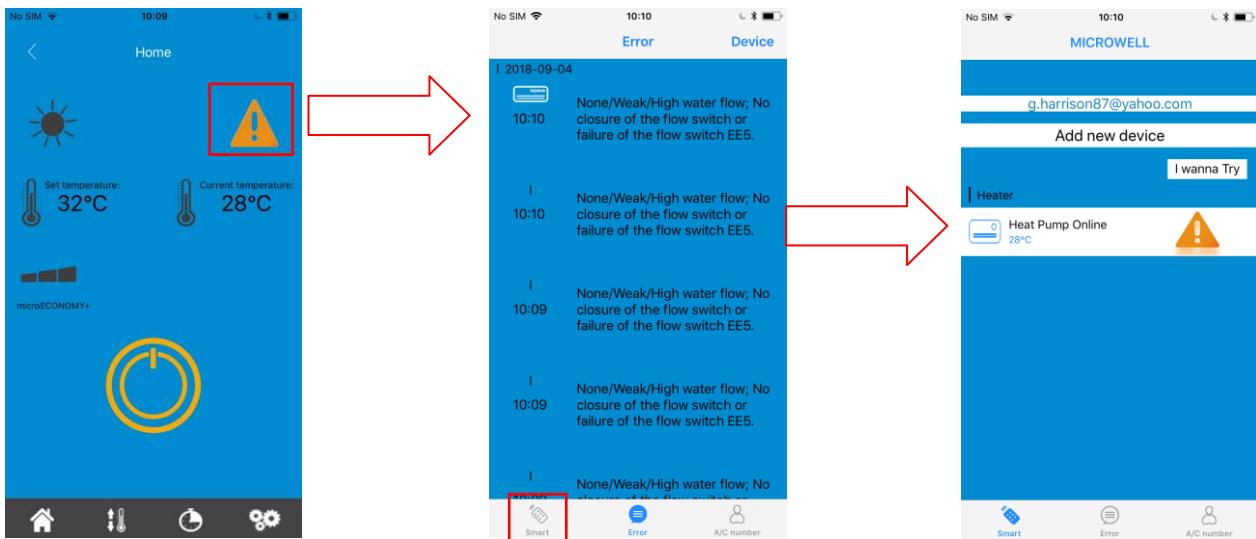

Note: Operational temperatures screen is useful for service and maintenance purposes.

Note: System parameters screen- Change in preset settings may lead to heat pump undesired performance issues, inefficiency, malfunction, failure or damage. Change can be performed by trained technician only!

Note: While browsing the screens and setting the heat pump sometimes the app needs more seconds to sync with the server and reload the screens so user have to wait a little bit. This is normal and depends on the quality of network.

Fault events:

In case of fault event a yellow triangle appears on Home screen. If user clicks on it the screen with the list of all fault events is opened with fault description. If user wants to go back to Home screen he must click „Smart“ field to open the device list screen then choose the heat pump.

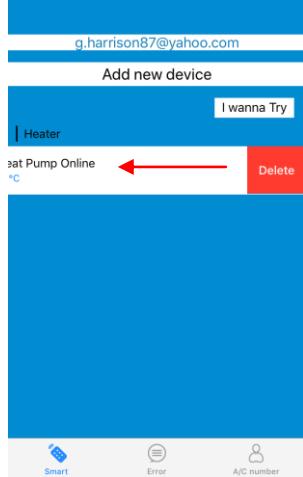

Removing the device from account:

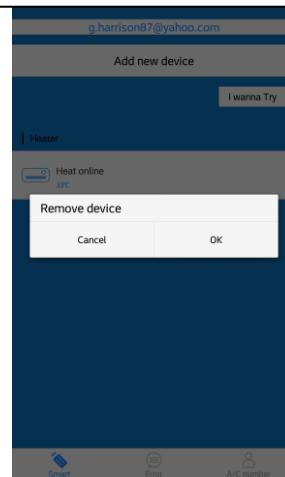

iOS: While on the device list screen swipe the heat pump to the left and „Delete“ appears.

Android: While on the device list screen tap and hold the heat pump and a pop up window appears to delete

iOS: Swipe to the left to delete

Android: Tap and hold the heat pump to delete
