

PRAGUE POOL FAIR 2013

Microwell took part in famous Pools, Saunas & Spa exhibition in Prague. The fair took place in EXPO Prague from 17th to 21st September 2013.

This international fair is mostly focused on B2B relationships in the industry. Together with parallel fairs, in total of 69.357 visitors have passed the gates of the EXPO Prague that week.

Please check out few pictures of Microwell stand below.

NEW DIGITAL REGULATOR – HUMIDISTAT & THERMOSTAT

All metal and stainless steel dehumidifier models equipped with digital regulator by standard have been enhanced. Following our customer's feedbacks we are glad to present new digital regulator. This regulator is able to act as a humidistat and thermostat. Thus if a dehumidifier is equipped with hot water element LPHW, the unit can work as a fan coil. The whole change has no effect on wholesale or retail price. All newly ordered units subject to this enhancement will be supplied with new humidistat & thermostat regulator.

DRY EASY 300 prototype

Following our continuous thrust for improvement and innovation we are excited to present you first glimpse of new wireless regulator DRY EASY 300. We already do have a working prototype which looks fantastic. Now, we are going to move onto testing phase. We are convinced that from January 2014 we will present this regulator into the market.

Wireless regulation compatible with all units

More and more end customers demand wireless regulation with their metal or stainless steel dehumidifiers. Signal transmission system has thus been enhanced to comply with our clients' demands. Wireless regulation is fully compatible with any cover material (plastic, metal and stainless steel).

Small antenna, just like on WiFi router, is visible on the dehumidifier...end customers just love it!

Strong fans for strong units

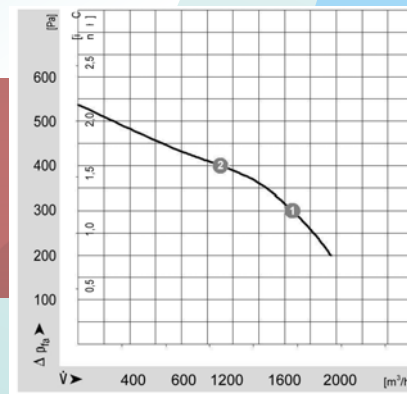

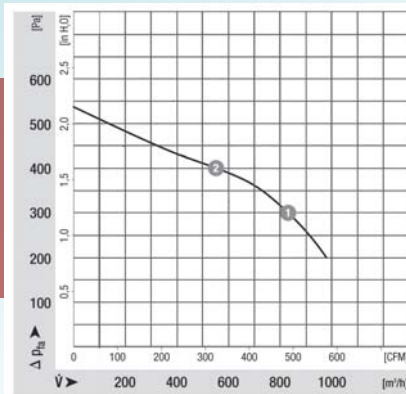

Being flexible is worthy. Microwell ducted dehumidifiers (500, 800 and 1200 series) have been enhanced with possibility to be equipped with 2 ventilator types. This is to meet all customers' requirements on air flow and external pressure. Ventilator number 1 achieves huge 800m³/h air flow at 300Pa external pressure. Ventilator two provides massive 1600m³/h at 300Pa.

Both ventilators are already available for sale, they will be included in 2014 catalogues and price list.

800m³/h @ 300Pa

1600m³/h @ 300Pa

INTERNAL AFFAIRS

3Q 2013

NEW 3000m² PRODUCTION AND WAREHOUSE SITE UNDER CONSTRUCTION

In March Newsletter we informed you about new Microwell site to be built. At this point the new site is well under construction with expected finish date by December 2013. We will keep you posted regarding this matter. **Please check out latest photos.**
