**3Q 2014**

### YEAR END SUCCESS

Last quarter of the year 2014 is ahead of us. This quarter is especially strong for swimming pool dehumidifiers. Although October is still solid for swimming pool heat pumps. In this 4 pages we are happy to announce news, technical improvements and innovations.

**Let's support each other and close year 2014 with success.**

#### In this newsletter you will find:

Pool Security microLIGHT	/ page 2
DRY EASY 300 available	/ page 2
Ducted dehumidifiers DRY800/1200DUCT available	/ page 3
Low energy dehumidifiers	/ page 3
Heat pumps 18-36kW in development	/ page 4
DRY500Plastik in new cover	/ page 4

## POOL SECURITY microLIGHT

We bring truly **unique innovation** to dehumidification and swimming pool business in general. Short look onto your dehumidifier or a pool reveals current humidity conditions in your pool.

Pool Security microLIGHT is a unique technology by Microwell that creates a pleasant hue around a dehumidifier. It is based on a latest know-how of transmitting the relative humidity readings into a multi-LED light system. LED strip projects light from the top back side of a dehumidifier to a wall. The color is automatically reflecting current relative humidity in real time continuously moving in gradient between blue, green and red. You no longer need to worry about particular humidity readings, Pool Security microLIGHT protects your pool for you.

**All Microwell DRY series dehumidifiers can be equipped with Pool Security microLIGHT on demand.**

## DRY EASY 300 available

We are happy to announce that new wireless regulator DRY EASY 300 will be available for sales as of 1st October 2014.

### New DRY EASY 300 has following advantages:

Transmitting frequency 833MHz (higher resistance against interference than 433MHz used on DRY EASY 200)

Signal transmission to longer distances

Bigger display with intuitive user-friendly interface

Modern design

3Q 2014

## Ducted dehumidifiers DRY800DUCT and DRY1200DUCT available

New ducted dehumidifiers available within 4Q 2014. Technical documentation and manuals will be shortly available on our web page. They complete the range of Microwell ducted dehumidifiers.

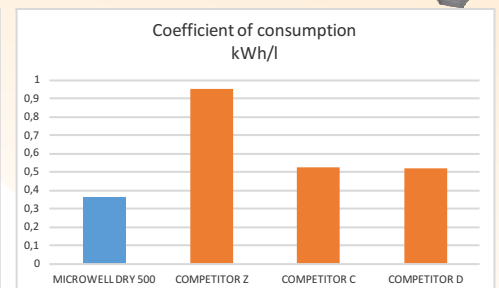

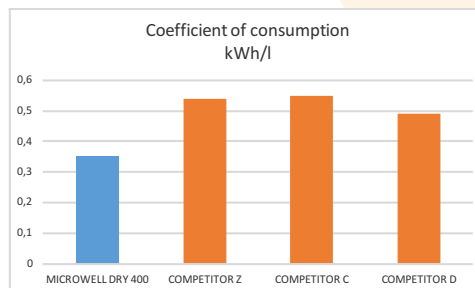

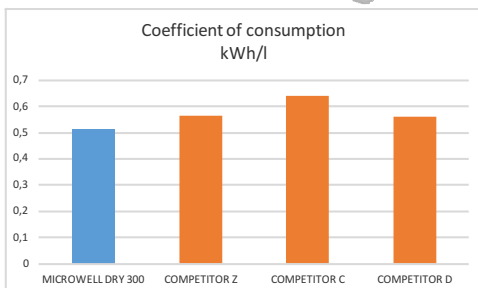

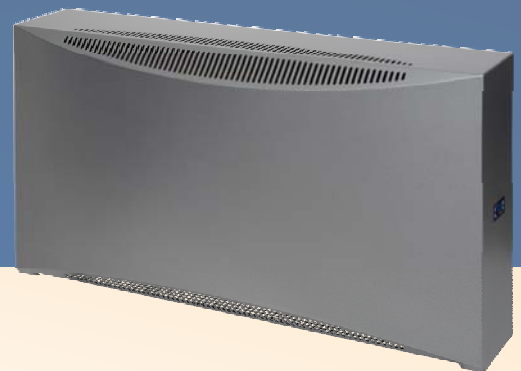

Again their main advantages are:

- Small size (practically equaling to their compact model peers)
- Massive air flow & external pressure (800m<sup>3</sup>/h or 1600m<sup>3</sup>/h at 300Pa)

## Low energy dehumidifiers

Again we would like to point out the energy efficiency of Microwell dehumidifiers. Thanks to cooperation with world leading compressor manufacturer we were able to improve an operational point of compressors used in our dehumidifiers. Performance was kept or increased and energy consumption was decreased.

Thus our dehumidifiers save money every day.

3Q 2014

## Heat pumps 18-36kW in development

We are currently developing swimming pool heat pumps with capacity 18-36kW. This is a natural step following great success of swimming pool heat pumps. They are exported successfully to 10 countries and average year-to-year increase of total sales for past 3 years reaches 85%. The heat pumps will be market ready for 2015 season. They are being developed to achieve solid 6.8 COP using titanium exchanger. Both makes – Compact and Split – will be available. By end of this year we will be able to share first pictures and technical details.

## DRY 500 Plastic in new cover

DRY500 Plastic swimming pool dehumidifier finally is new acryl cover. It is a considerable improvement towards previously used fiberglass cover. This cover is compact, more durable and shinier. Customers appreciate that the cover is supplied in plastic protection foil just like your new phone, TV or computer. DRY500 Plastic in new cover is now supplied for all new orders.
